DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
3. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zeon Corporation (Zeon), European EP 1,291,386 in view of Nakamura, U. S. Patent 6,815,488 or McCullough, Jr., U. S. Patent 6,015,854 or Grasmeyer, U. S. Patent 5,731,376.

Reference to Zeon specifically teaches a molding composition with the claimed polymer and the hindered amine compound. The use of mold release agent is not specifically mentioned nor is the required solubility parameter relationship. Conventional additives are taught. All three secondary references teach molding compositions from hydrocarbon polymers different than the hydrocarbon polymers of the claims insofar as

no alicyclic structure is present, but still hydrocarbon polymers, with both hindered amine compounds and fatty acid amide mold release agents. It would, therefore, be prima facie obvious to one of ordinary skill in the art to add the conventional mold release agents of the secondary references to the compositions taught for molding of Zeon. The solubility parameter relationship of the hindered amine and the fatty acid amid would either be inherent in their chemical make-up or prima facie obvious absent evidence of unexpected results commensurate in scope to the claims. The rejection under 35 USC 103 is, therefore, proper.
